

# L<sup>A</sup>T<sub>E</sub>X for Linguists!

Will Styler

November 17, 2012

This whole presentation assumes you're using X<sub>Y</sub>L<sup>A</sup>T<sub>E</sub>X. Make sure things are set up accordingly.

## **To typeset/build this (or any other) document:**

1. Install a LaTeX distribution on your machine (MacTeX for OS X, MikTeX for Windows)
2. Install TeXShop or, better still, TeXMaker
3. Configure TeXMaker or TeXShop to use Xelatex (see the slides)
4. Open "handout.tex" using TeXMaker or TeXshop
5. Build the document
  - For TeXMaker, click "Quick Build" in the "Tools" menu
  - For TeXShop, make sure "XeLaTeX" is selected, then click "Typeset"
6. Look for the PDF in the same folder as the .tex file, there's your result
7. Profit!

## **To add a bibliography:**

1. Use a reference manager which can export to bibtex
2. Export your references to a .bib file in the same folder as the .tex file
3. Add citekeys to your text (they look like \cite{Pruthi:2004iw})
4. Add the lines specifying the bibliography's location and style to your document
5. Build BibTeX, then the document
  - For TeXMaker, click "BibTeX", then "Quick Build", both in the "Tools" menu
  - For TeXShop, "Macros" -> Applescript -> "Bibliography"
6. Profit!

**The following page is just a demonstration of the different commands available to you when building an article-style document.**

Hello!

This is a document.

New line for this sentence. No newline here.

**This part is bold**, *this part is italic*.

Whoa, Unicode! ħ /aɪ pi eɪ wɜks hiɪ/ русский также!

Note that more returns don't mean more space.

See?

Now, a bit of breathing room...

And some horizontal

room

Normal Text, Centered

This makes text bigger.

## Bigger Still

1. List item 1
2. List item 2
3. List item 3

We don't need hierarchy here<sup>1</sup> :

- List item 1
- List item 2
- List item 3

Remember, you've got to escape characters like \$, %, #, {, }, or \_. Some chars need to be specified by name, like ~or \.

## 1 This is a section

Cool, huh?

### 1.1 Bam. Subsection

We can do deeper.

#### 1.1.1 Sub-subsection

Don't worry, you can't go deeper than a sub-subsection. Inception avoided.

---

<sup>1</sup>Boom. Footnote.
